

Icon toolbar (top/right screen)

- 1) Refresh. Load data from database, in case there have been an update (from another user working on the same customer) Refresh also happens at a regular interval (30 seconds), the interval time can be configured in Operia Configuration → General → Refresh Interval
- 2) Feedback. Allows the user to come with bug reports or ideas for improvements. Entries can be read in Operia Configuration → Feedback
- 3) Search. Not yet implemented.
- 4) Account Menu

- 1) Account. Takes you to the account page.

Account Page

Preferences

Profile Information

First name

Last name

Username
Display name used across the system

Email
Used for account notifications

Appearance
Choose how Operia looks and behaves

Theme mode
Choose how Operia looks to you. Select a single theme, or sync with your system.

☐ System ☒ Dark ☐ Light

The user can change his Name, Username, Email. Username is used for display on the web; First, Last name are used for email, SMS, etc.

Appearance. Choose same theme as computer (only supported on some OS), dark or light mode.

Navigation
Classic fixed sidebar, or a dropdown menu in the bottom left.

☐ Classic ☒ Modern

Language
Choose the interface language

Language
Applies to the whole interface. Danish is the default.

☐ Dansk ☒ English

Password
Change your password

Current password

New password
At least 8 characters.

Handheld app
Install Operia on a handheld device or phone

QR code
Scan with the device camera to download and install the app.

Navigation. Classic: all menu-items are available on the sidebar. Modern: Only the package flow menu-items are visible (*should also be Asset flow I think*), and displayed as buttons instead of menu-texts. All the remaining functionality is available from the start menu (bottom/left).

Language. Select language. Only Danish/English for now. Others can easily be added.

QR. Take picture or download for Mobile Android app install. The QR code is just an url pointing to the Supabase Amazon S3 bucket containing the APK.

Configuration

There are two configuration levels: Operia Configuration and Customer Configuration.

Operia Configuration is site-wise configuration options. They're either system wise configurations (applicable for all customers), or determine the functionality which is available application-wise (for all customers), or functions as a template for configurations of new customers – depending on which Operia Configuration is chosen. Only Super-users can see the Operia Configuration.

Customer Configuration are configuration settings for a single customer. Will override the Operia Configuration, when the Operia Configuration is a template for Customer Configurations. Only Managers (& Super-users) can see the Operia Configuration.

The two configurations can be found at 1) the bottom of the side-menu (classic navigation layout), or bottom of drop-down menu (modern navigation layout)

Operia Configuration has these items:

- 1) Customers
- 2) Users
- 3) Feedback
- 4) General
- 5) Products & Features
- 6) Home Design
- 7) Handheld Design
- 8) Carriers
- 9) Shipping & Billing
- 10) Assets
- 11) Maps & Routes
- 12) Data Transfer
- 13) API Keys
- 14) Integrations
- 15) Templates
- 16) Localization
- 17) Notifications
- 18) Billing
- 19) Logs
- 20) Log Drains

1) Customers.

This configurations shows all customers created in Operia. The table is a common feature used throughout the application. Top/Right: search/filter; all columns are sortable; leftmost column has checkboxes which can be selected/unselected by clicking on the checkbox, rightmost column has stars which can be starred/unstarred by clicking on the star / or by right-clicking on a row. Checkbox column header has a drop down menu, which at a minimum has these two items: Select All; Starred + more depending on which table it is. When one or more rows have been selected, a selected row will be displayed under the table: this has at a minimum these two icons (right-

aligned): Show only selected; Delete Selected. Delete selected will popup a warning/confirmation dialog, where the user has to click on checkbox to confirm + type in “delete” (or “slet” in Danish) in their selected language.

☐	Name	Reg. no.	Products	Active	Created	
☐	Aarhus Medico ApS	22334455	2	Yes	11.07.2026	☆
☐	Citypost Danmark ApS	20110009	2	Yes	11.07.2026	☆
☐	DCA Demo A/S	12345678	3	Yes	10.07.2026	☆
☐	Fjordbyg Entrepriise ApS	20110007	1	Yes	11.07.2026	☆
☐	Grandal & Søn ApS	20110003	1	Yes	11.07.2026	☆
☐	Kolding Teknik A/S	11223344	3	Yes	11.07.2026	☆

☐	Skovgaard Medico A/S	20110008	1	Yes	11.07.2026	☆

Showing 1-9 of 9 customers

< Previous 1 Next >

Delete 2 customers ✕

You are about to delete 2 customers. This action cannot be undone.

☐ I understand that this will permanently delete the selected customers and all associated data.

Type "delete" to confirm

delete

Cancel Delete 2 customers

Clicking on a row displays a detail pane (or most tables) with two or more tabs. The leftmost tab is always “Details”, and the rightmost tab is always “Actions.” To the right of Actions, is always two icons: Maximize/Normalize (maximize/normalize the detail pane), and a “X” to remove the detail pane.

The **Details** tab typically has:

ID of the selected id (in a non-editable field + copy-to-clipboard icon). The ID is Operia’s internal ID, and used for issue tracking if a customer calls in with a problem.

Name, Description, Notes – where available. And on Customers also: “Reg no.”

Any changes will always display the Cancel/Save Changes bar at the bottom of the screen. Such that you always know precisely where it is.

The **Action** tab typically has a delete function. With the same popup warning dialog. And on Customers also a button to deactivate a customer (can be re-activated)

Cancel Save Changes

On Customers, the other tabs are:

- 1) Products
- 2) Billing
- 3) Shipping & Billing
- 4) Logo
- 5) Localization

- 6) Appearance
- 7) Data Transfer
- 8) Log Drains

Products.

Products are whole systems the customer buys access to. They control which screens and menus are available.

Products the customer buys Select all

Parcels Track & trace for internal parcels (core product) No expiry ☒	Assets Asset and inventory management ☐
Inventory Stock management: quantity-based consumables, reorder points and stock movements ☐	Smart lockers Handover via smart lockers ☐
IoT sensors Sensor data and alerts ☐	Shipping Outbound shipments via carriers ☐
Route planning Internal distribution routes ☐	

Features

Change log Full audit trail of changes ☐	Export Export parcels to CSV/JSON ☐
Handheld: Multiple departments Scan parcels for different departments in one intake ☐	Handheld: Move Relocate parcels internally on the handheld (scan → new location/status) ☐
Handheld: Email on receive Send an arrival email to the receiver when a parcel is received on the handheld ☐	Handheld: Receive Receive parcels on the handheld (scan & register) ☐
Handheld: Route plan Show saved routes on the handheld and navigate via Google Maps ☐	Handheld: Search Search for parcels on the handheld ☐
Handheld: Condition Document parcels with photos and notes on the handheld ☐	Handheld: Hand out Hand out parcels on the handheld (find, receipt, signature) ☐

Here the Customer can be given access to products & Features. Features belong to Products, and only the Features of the activates Products are shown. Products and Features can also be given an expiry date.

Billing

Purchasing email (optional)

indkoeb@firma.dk

Purchase orders from Inventory are sent here. Can be overridden per order.

Only has this one configuration: purchasing email. ***This configuration option should be moved under Details.***

Shipping & Billing

Select Margin or BYOC

Shipping and invoicing rules. Margin model: Operia owns the shipping agreement and adds a margin. BYOC: the customer uses their own shipping agreement, and you invoice for the system.

Shipping model

Margin — Operia owns the shipping agreement

Customer price = cost price × (1 + percent) + fixed amount. Set one to 0 if you only want to use the other.

Markup (%) Fixed amount per shipment (kr.)

Shipping and Invoicing rules. Margin model: Opera owns the shipping agreement and adds a margin. BYOC: the customer uses their own shipping agreement, and you invoice for the system.

Shipping model

BYOC — customer's own shipping agreement

The customer pays the carrier directly. You invoice a subscription and/or fee per shipment. Set one to 0 if it should not be used.

Subscription per month (kr.)

0

Fee per shipment (kr.)

0

Customer's shipping agreements

Used with BYOC: the customer's own aggregator account or carrier agreement. The key is stored securely and can never be shown again — only replaced or removed. It is used only server-side at booking.

No shipping agreements yet.

+ New

Logo

Upload a customer logo. *I think the menu is deprecated, as the functionality has been moved under Home Design.*

Localization

Select language (templates, etc.), currency (used in Shipping & Billing), and timezone.

Appearance

Change colours, texts of individual products. *This features has not been implemented throughout, not sure if it is still required.*

Data Transfer

Enable / disable SFTP and/or Email data updates for this customer.

☐ SFTP
CSV over SFTP - ftp.predictioninstitute.com

☐ Automatic email
CSV sent as an email attachment.

Log Drains

Automatically send log messages to a third party system. Either HML/NDJSON (generic) or Grafana Loki.

This is an advanced feature which is usually only available for pro-packages.

New drain

Name

e.g. Datadog (production)

Destination

HTTP / NDJSON

Enabled

Endpoint (URL)

https://example.com/ingest

Events are POSTed as newline-delimited JSON (NDJSON). A token (if set) is sent as Bearer.

1) Users

This configurations shows all users created in Operia. Users are actually created in Supabase (Supabase → Dashboard → Project → Authentication) and only copied to Operia. For increased security and things like 2FA.

On the **Details** tab, the name and email can be changed.

Access tab: give individual roles to the user. Currently these roles are defined:

1) Managers: access to everything (that is accessible on the customer. Customer managers, still do not have access to Operia configurations, or other customers, etc. - same as the current users)

- all pages the other roles can access, including customer configuration

2) Data Managers

- can access the pages under Master Data; Employees, Departments, Lockers, Import/Export.

3) Package handlers

- can access the Parcel pages: Receive parcel, Hand out parcel.

4) Package managers

- in addition the pages of the Package handlers, can also access the parcel pages: Parcel Dashboard, Parcels, Parcel Reports, Parcel Statistics.

5) Handheld package handler

- Can register and hand out parcels on the handheld.

6) Asset handlers

- not yet defined.

7) Asset managers

- can access all pages under Assets.

8) Handheld asset handler

- not yet defined.

9) Inventory handlers

- not yet defined.

10) Inventory managers

- can access all pages under inventory.

11) Handheld inventory handler

- not yet defined.

12) Route Planner handlers

- not yet defined.

13) Route Planner managers

- can access all pages under Route Planner.

14) Handheld Route Planner

- can use the route planner on the handheld

Roles control which pages the user can access. A user can have several roles; every user can access the home page.

GENERAL

☒ Manager Full administration: all pages including company configuration.	☒ Data manager Access to the Master Data pages: Employees, Departments, Lockers and Import/Export.
---	--

PARCELS

☒ Parcel handler Access to the parcel pages Receive parcel and Hand out parcel.	☒ Parcel manager As parcel handler, plus Parcel dashboard, Parcels, Reports and Statistics.
☒ Handheld: parcels Can register and hand out parcels on the handheld. Signs in on the Android handheld app — not the web admin.	

ASSETS

☒ Asset handler Not defined yet — only grants access to the home page.	☒ Asset manager Access to all pages under Assets.
☒ Handheld: assets Not defined yet — only grants access to the home page. Signs in on the Android handheld app — not the web admin.	

INVENTORY

☒ Inventory handler Not defined yet — only grants access to the home page.	☒ Inventory manager Access to all pages under Inventory.
☒ Handheld: inventory Can update stock levels on the handheld. Signs in on the Android handheld app — not the web admin.	

Action tab, has delete user (will also be deleted in Supabase) and change password

Change password ✕

Set a new password directly, or switch this on to email the user a reset link.

☒ **Send a reset link instead**
The user gets an email with a link and chooses a new password themselves.

New password Show

At least 8 characters

 **Generate strong password**

Cancel **Change Password**

New password can be explicitly written in (or automatically generated), or a link can be sent to the user, where he can change it himself.
